

STRUCTURAL SOLUTIONS

for floor movement joints

Kirk Marketing has developed the Kirk Structural brand, enabling specifiers and engineers to choose from a variety of high-quality structural joints and covers for their projects. The new brand is designed to absorb any floor movement experienced in commercial applications.

Kirk Structural includes three brands: M.Trim, Arfen and Vexcolt. These can absorb vertical, horizontal and shear movement. Whether the concrete slab is post-tension, pre-tension, precast, reinforced or coffer, these solutions will be able to absorb the movement it experiences.

An added benefit is that the joints complement virtually any type of flooring that can be used, including tiles, carpet, and vinyl, among others. There are cost-effective options based on your choice and design, and the great variety of designs allows specifiers to match the requirements exactly to the solutions.

The company has created a comprehensive 13-point questionnaire to assist specifiers in selecting the correct product. The brand includes a comprehensive range of fire barriers, water-proof systems and detailed fitting instructions.

Kirk Structural is used in commercial buildings, offices, shopping centres, airports, train stations and parking decks. For a comprehensive range of structural covers in aluminium, rubber and

steel plate combination, partner with Kirk Marketing.

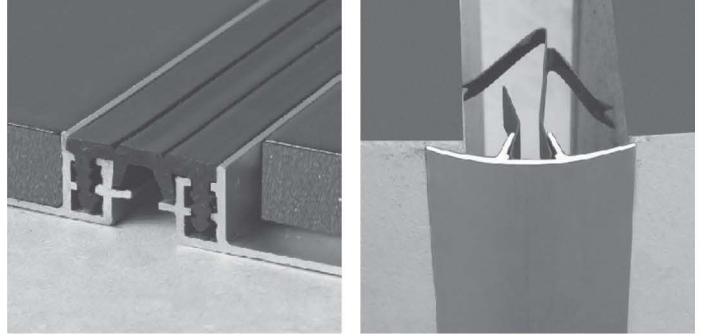

For more information, contact Kirk on +27 (11) 444 1441 or via www.kirk.co.za.
